Experience

Amazon Web Services – Software Development Engineer / Graph & Key-Value Databases Mar 2023 – Nov 2025

- Built core components of a distributed fleet management platform powering automated database provisioning, workload orchestration, and backups across **5,000+ production clusters** and **10+** AWS regions
- Led a team of 3 engineers to develop an internal web application that streamlined operational incident response by eliminating manual log and dashboard analysis, saving significant **on-call effort for 30+ engineers**
- Researched, designed and delivered log export infrastructure leveraging native AWS services, now deployed across **3000+ clusters** helping **100+ customers** debug ETL and graph analytical workloads
- Owned end-to-end observability infrastructure for AWS's graph analytics database, spanning low-level C/Java components to AWS services (DynamoDB, SQS, Lambda), supporting **99.9% service availability**
- Collaborated with product managers to develop new APIs for customers to export their analytical graph data to S3, delivering customer use cases for AI graph-RAG applications unlocking **$5M+/year** in revenue
- Core contributor of critical end-to-end testing infrastructure to safeguard backward and forward compatibility between database engine versions, enabling reliable cluster upgrades across the entire fleet in **10+ regions**
- Mentored junior engineers in effective use of various AWS services such as DynamoDB, Lambda, SQS, etc.

Amazon Web Services – Software Development Engineer Intern / Graph Databases May 2022 – Aug 2022

- Designed and developed a Java-based proxy service that provided existing customers with an out-of-the-box high-availability solution while maintaining low latency and high throughput

Shopify – Backend Developer Intern / Inventory Management Sep 2021 – Dec 2021

- Implemented and deployed critical inventory management APIs leveraging Ruby on Rails, GraphQL, and MySQL, applying object-oriented design principles and test-driven development
- Co-designed production inventory management RESTful APIs, from API design through MySQL database schemas, now used by all Shopify Fulfillment Network suppliers to improve inventory tracking

Flipp – Software Engineer Intern / Data Ingestion Jan 2021 – Apr 2021

- Developed a high-throughput data aggregation microservice capable of processing 1,000+ product records per minute using Kafka, Ruby on Rails and MySQL, while applying object-oriented design principles
- Diagnosed and resolved production data aggregation issues impacting retailers such as Walmart, Staples etc. deep diving into SQL query planning, improving data processing stability by over 20%

Verto Health – Full Stack Developer Intern Sep 2020 – Dec 2020

- Designed and developed production-grade healthcare platform features for 10+ hospitals, including patient onboarding and vaccine tracking workflows, using React, Ruby on Rails, and Postgres

Royal Bank of Canada – Software Developer Intern Jan 2020 – Apr 2020

- Designed and developed a full-stack web application using Python Flask, MongoDB, and React to demonstrate emerging AI-driven chat-bot solutions, earning 2nd place at the RBC Tech Innovation Challenge

Education

University of Toronto, Honors Bachelor of Science Sep 2018 – Dec 2022

- Major in **Computer Science** - Software Engineering Specialist, Graduated with Distinction
- Teaching Assistant **:** Introduction to Software Engineering, Engineering Large Software Systems

Technical Skills

- **Languages:** Java, Python, C, Ruby, JavaScript, Typescript, Bash, SQL, Groovy
- **Frameworks:** Ruby on Rails, React, Node, Python Flask, Java Spring Boot
- **Other:** AWS (Lambda, DynamoDB, SQS, ECS, etc.), Redis, Kafka, Docker, GraphQL, MongoDB
